Strategic Premise

The AI labor market in 2025–2026 is structurally dislocated. Frontier labs, F-500 technology divisions, and AI startups have executed waves of delayering — cost-cutting headcount reductions that have put world-class ML engineers, AI safety researchers, and infrastructure engineers onto the market at significant compensation discounts from their prior packages. These are not underperformers. They are highly credentialed, experienced, and actively looking for environments that are technically serious and financially stable.

Anticloud's hiring strategy targets this specific pool: ex-frontier lab (Meta, Google DeepMind, OpenAI, Anthropic, Oracle AI) and F-500 AI division talent, acquired at structural market discount, retained through competitive long-term compensation, equity alignment, and an environment that eliminates the reasons people hop.

The core insight: a 30% engineering allocation on an $80M raise ($24M) can acquire and retain a world-class 12–15 person team for 36+ months if structured correctly. The goal is not headcount — it is capability density and retention.

Retention Philosophy

High turnover in AI teams is not primarily a compensation problem. It is an environment problem. Engineers at frontier labs leave because:

1. Bureaucracy and org politics slow technical progress

2. Their work ships into a blackbox product they cannot publish or claim

3. The mission has drifted from research to product shipping under commercial pressure

4. Lack of ownership, credit, and attribution

Anticloud's retention strategy addresses each directly:

- Flat structure: no middle management layers between engineer and founder
- Open corpus: all 123 projects are publicly attributed, citable, and ORCID-linked
- Mission coherence: the technical agenda (proprioceptive AI, AIOSS, SoT) is the product — there is no drift between research and deployment
- Long retainer contracts with milestone bonuses: 24–36 month agreements with performance-linked upside, reducing incentive to hop
- Competitive base + equity pool: OTE at or above frontier lab levels, not discounted because of market conditions

The structural discount is captured at hire; the retention is purchased through environment and long-term contracts, not through underpaying and hoping people stay.

First 5 Hires (Post-Initialization Round, 0–12 Months)

Hire 1 — Principal ML Researcher (Model Architecture)

Target profile: Ex-Meta FAIR, Google DeepMind, or Anthropic. 5+ years post-PhD. Published work in efficient transformers, quantization, or neurosymbolic reasoning. Comfortable with 27B–70B parameter models and fine-tuning pipelines.

Role: Leads PAX architecture evolution: TRL 7 → TRL 8 closure, SoT proprioceptive layer development, concept-grounded representation research (post-tokenization agenda). First paper output within 6 months — ORCID-linked, Zenodo-archived.

Compensation range: $350K–$500K OTE (base + performance) + 0.5–1.5% equity. 36-month retainer with 12-month cliff.

Hire 2 — Principal Infrastructure / MLOps Engineer

Target profile: Ex-Oracle AI, AWS Bedrock team, or Google Vertex AI infrastructure. 7+ years in distributed inference, quantization serving, and air-gap deployment. CUDA optimization background.

Role: Owns the inference stack: PAX serving optimization, AIOSS ledger performance, air-gap deployment tooling, CI/CD pipeline for the 123-project corpus. Closes TRL 8 CI/CD gap in benchmark suite.

Compensation range: $320K–$450K OTE + 0.5–1% equity. 36-month retainer.

Hire 3 — AI Safety and Compliance Lead

Target profile: Ex-frontier lab AI safety team or ex-NIST/MITRE contractor. Deep familiarity with NIST AI RMF, EU AI Act high-risk system requirements, FedRAMP authorization process, HIPAA technical safeguards. Publication record preferred.

Role: Drives FedRAMP Moderate authorization process, EU AI Act conformity assessments, HIPAA BAA technical implementation, and SOC 2 Type II observation period. Produces independently publishable compliance reports per quarter.

Compensation range: $280K–$380K OTE + 0.3–0.8% equity. 24-month retainer.

Hire 4 — Enterprise Solutions Engineer (Regulated Verticals)

Target profile: Ex-Palantir AIP, ex-Oracle Health, or ex-AWS Public Sector. Technical pre-sales and deployment background in healthcare, defense, or financial services. Can run a HIPAA gap assessment and a PAX proof-of-concept in the same week.

Role: Owns design partner onboarding, technical pilot execution, and enterprise deployment support. First design partner revenue within 6 months of hire. Builds the reference customer case study library.

Compensation range: $220K–$320K OTE (base + commission) + 0.2–0.5% equity.

Hire 5 — Head of Research Communications / Developer Relations

Target profile: Ex-Hugging Face, ex-EleutherAI, or senior technical writer with ML publication background. Comfortable writing papers, benchmark methodology docs, and short-form content in the same week.

Role: Owns the content flywheel: research writeups for High-DA platforms, Dev.to articles, HackerNews posts, benchmark methodology documentation, short-form content scripts for YouTube Shorts and TikTok. Ensures every PAX result is independently verifiable and publicly indexed within 48 hours of generation.

Compensation range: $180K–$260K OTE + 0.2–0.4% equity.

Hires 6–12 (12–24 Months, Post-Design-Partner Revenue)

Role	Target Background	Comp Range
ML Engineer — Fine-tuning	Ex-Meta RLHF team	$280K–$380K
Security Engineer	Ex-MITRE ATT&CK, ex-CrowdStrike	$260K–$360K

Embedded Systems / IoT Engineer	Ex-Tesla Autopilot, ex-Boston Dynamics	$260K–$350K
Enterprise Account Executive	Ex-Palantir, ex-Databricks	$220K–$400K OTE
Legal / IP Counsel (in-house)	USPTO patent prosecution background	$250K–$350K
Biosignal / EEG Research Engineer	Academic + industry background	$240K–$320K
DevOps / Platform Engineer	Kubernetes, air-gap infra	$220K–$300K

Total Compensation Budget

Phase	Headcount	Annual Payroll Estimate	Equity Pool
Phase 1 (0–12 months)	5 hires	~$1.8M–$2.5M/yr	~3–5% of cap table
Phase 2 (12–24 months)	+7 hires	~$4M–$6M/yr total	~5–8% of cap table
Phase 3 (24–36 months)	+5–10 hires	~$6M–$10M/yr total	~8–12% of cap table

At $24M engineering allocation (30% of $80M raise), Phase 1 and Phase 2 are fully funded with compute and infrastructure margin.

Why This Team Wins

The combination of ex-frontier lab technical depth + long retainer structure + open attribution + mission coherence creates a team that is:

- **More capable** than a startup-salary team hired at market discount
- **More stable** than a frontier lab team subject to commercial re-prioritization
- **More productive** than a larger team with management overhead

Every hire is a research asset, not just a headcount. Their output — papers, benchmark results, compliance reports, open-source contributions — compounds the corpus and the brand simultaneously.
